WEB DEVELOPMENT
ACTIVITY-BASED LEARNING

FINAL PROJECT REPORT

Student Name	Kadiyala Jaswanth Narayana Chowdary
Roll Number	26001302
Branch	CSE
Section	CSM-7
Subject	Web Development

Repository: WEB-DEVELOPMENT-ABL GitHub Repository

Published project: GitHub Pages Website

1. Introduction

This Activity-Based Learning project presents three beginner-friendly websites created using HTML5 and CSS3. The case studies demonstrate how to structure webpage content, apply styles, organize information, and provide navigation between sections. The websites are published using GitHub Pages.

2. Objectives

• Understand the basic structure of an HTML5 document.

• Apply CSS rules to control layout, colors, typography, spacing, and presentation.

• Create navigation links and organize content into meaningful webpage sections.

• Publish static websites using GitHub Pages and maintain project files in GitHub.

• Test the published pages in a web browser and document the completed work.

3. Case Studies

Case Study 1 — Personal Portfolio Website

Objective: To introduce the student and present personal, educational, skills, project, and contact information.

Main features: Header and navigation links; introduction/hero section; profile initials; about section; portfolio-related content.

Technologies: HTML5 and CSS3.

Live website: https://jaswanthnarayana-2007.github.io/WEB-DEVELOPMENT-ABL/Case-Study-1-Portfolio/

Case Study 9 — Bakery and Cake Shop Website

Objective: To create a bakery website that displays products, offers, and shop information.

Main features: Bakery navigation; welcome banner; best-selling products with prices; weekend offer; about section; contact details; footer.

Technologies: HTML5 and CSS3.

Live website: https://jaswanthnarayana-2007.github.io/WEB-DEVELOPMENT-ABL/Case-Study-9-Bakery/

Case Study 17 — Tourism and Heritage Information Website

Objective: To create an informational website highlighting tourism, heritage, and places to visit in Andhra Pradesh.

Main features: Navigation for destinations, heritage, culture, and travel tips; introductory banner; popular destinations section.

Technologies: HTML5 and CSS3.

Live website: https://jaswanthnarayana-2007.github.io/WEB-DEVELOPMENT-ABL/Case-Study-17-Tourism/

4. Technologies Used

HTML5: Used to create the structure and content of each webpage, including headings, paragraphs, links, lists, and semantic sections.

CSS3: Used to style the webpages through colors, fonts, spacing, borders, layout, and visual presentation.

GitHub: Used to store and organize the project source files.

GitHub Pages: Used to publish the static websites so they can be viewed through public web links.

5. Syllabus Mapping

Unit I — Fundamentals: The work applies basic webpage/document structure, syntax, and foundational programming concepts to organize website content.

Unit II — Styling and presentation: The case studies use typography, colors, backgrounds, spacing, borders, margins, padding, lists, and page layout.

Unit III — Navigation and semantic structure: The websites use HTML5 elements, hyperlinks, anchor navigation, and internal page links to organize and connect content.

6. How to View the Projects

• Open the GitHub repository using the link on the cover page.

• Open the folder for the required case study.

• Open index.html in a browser, or use the published GitHub Pages links in Section 3.

• Use the navigation links to explore the webpage.

No external framework or server installation is required to view these static websites.

7. Testing and Observations

The published websites were opened in a browser and their main page content and navigation layouts were reviewed. The websites are static frontend demonstrations. Contact, order, and form-like controls are presentation elements and do not submit information to a backend service.

8. Project Screenshots

The three screenshot image files were located in the corresponding case-study folders in the GitHub repository. Use the links below to open each screenshot. The filenames are retained as they currently appear in the repository.

Case Study 1 — Personal Portfolio

9. Conclusion

This project demonstrates the use of HTML5 and CSS3 to build and publish three simple informational websites. Through the case studies, the student practiced structuring webpage content, applying styles, creating navigation, organizing files, and publishing websites with GitHub Pages. The project provides a foundation for developing more interactive and responsive websites in future work.

Submission note: This report includes direct links to the screenshots stored in the GitHub repository. Before submitting, open the PDF and verify that all links work and that the lecturer's required format and screenshot count are satisfied.
